

# COMPRESSOR SERVICES AT ALAMO

In continuing our commitment to providing a full range of service for our customers, we have expanded our portfolio to include compressor component repair. With our many years of experience in remanufacturing, we now offer that same standard of reconditioning quality for compressor components.

Before reconditioning services are rendered, the component pieces are assessed by our resident lead machinists, millwrights and welders. The pieces are then restored to their original specifications in-house, for optimal performance.

Our technicians employ an AMC precision boring machine, custom built lapping machine, metalizing system, cylindrical grinder, custom built piston/rod torque bench, Sunnen honing equipment, five engine lathes, three mills, and two hydraulic presses to provide disassembly and reassembly, inspection, machining, re-sizing, cleaning, lapping, babbiting, bead blasting, quality control testing and replacement to all internal compressor components.

## RECONDITIONING SERVICES

Packing cases, piston and rod assemblies, wiper & auxiliary boxes, compressor valves, VVCP assemblies, crossheads, connecting rods, and bushings.

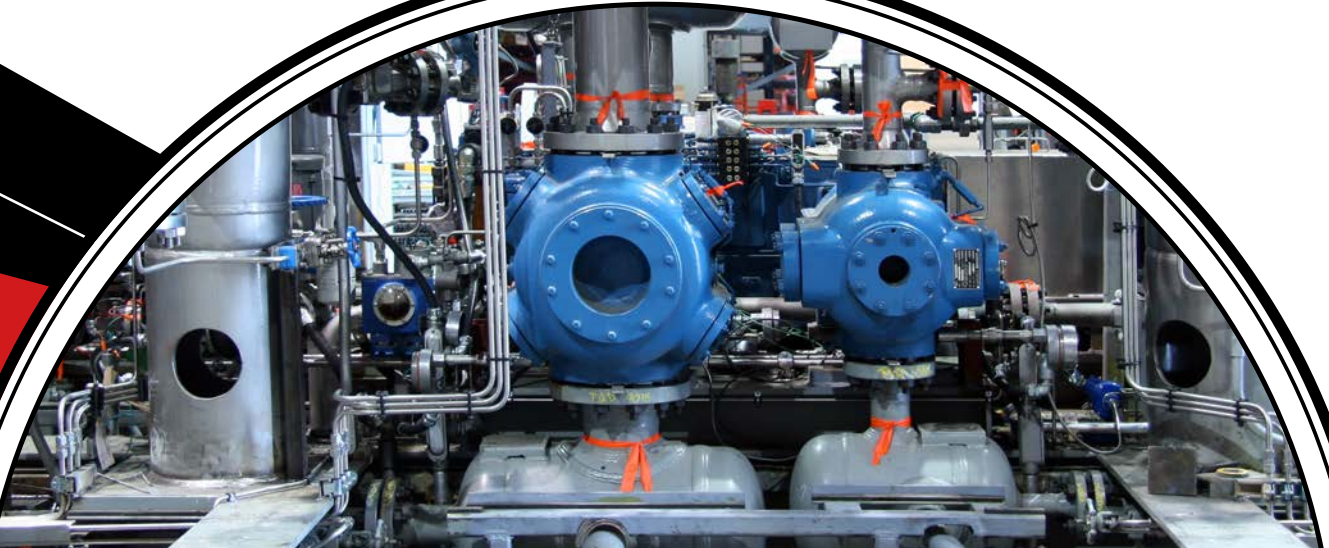

## MANUFACTURE & SUPPLY

Piston rings, wear bands, packing cases, wiper & auxiliary boxes, pump plungers, shaft seal fits, valve rings, and miscellaneous components.

## FIELD SERVICES

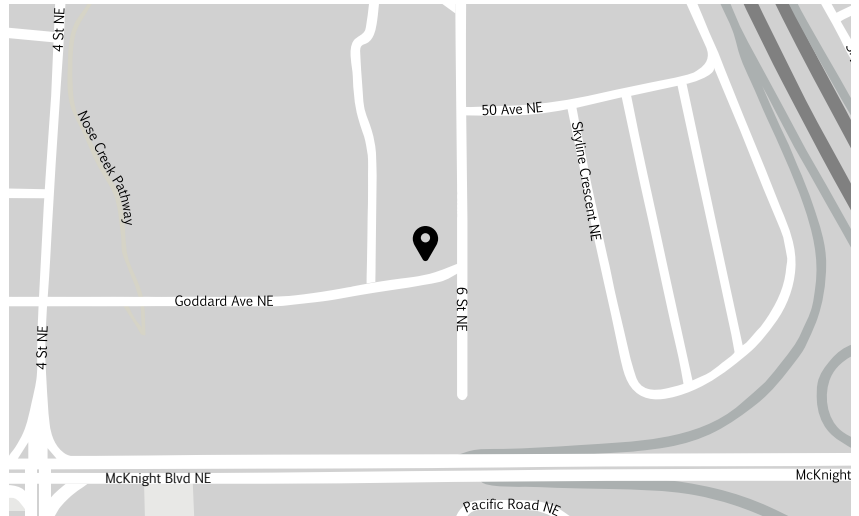

Vibration analysis, custom design, scheduled maintenance, troubleshooting, and inspection.
